# What is a Mother Bin

Combines have increased capacity, yet truck sizes remain the same. The combine has evolved and innovated, but how grain is hauled away hasn't changed and **MUST** change. Today's combines are bigger, better, and faster. As a result today's grain storage and handling systems need to be bigger, better and faster. The Walkabout Mother Bin meets that need and then some. Ignore the chaos, quell your resistance and factor a Mother Bin into your harvesting operation.

*"It was like adding another combine. It really picked up the slack because of the extra surge capacity. We were able to finish fields in the evening after the semis were done loading. If the semis had issues or breakdowns we still didn't have to shut down the combine because we had extra capacity for storage."*

*~Keegan Jones, Pendleton, OR*

Located in South Dakota, Walkabout Mother Bins is making efficient and affordable grain storage harvest systems. A link between grain carts and trucks, the Walkabout Mother Bin allows the combine to run continuously, eliminating bottlenecks.

The Walkabout Mother Bin is essential harvest equipment offering a large, portable, in-field grain storage solution (4,000-bu capacity). This amazing concept saves time, money and labor while increasing harvest and grain handling efficiency!

# Specs & Features

*Scan here to visit our specs & features page on our website*

- ★ 4,000 bushel capacity
- ★ Split front and rear flow gates for blending grain
- ★ Up to 900 bushel-per-minute unload rate
- ★ 4-way adjustable auger spout
- ★ Rear access door
- ★ Full length clean out doors
- ★ 58' long x 13' 9" wide x 12' 11" high
- ★ AGRI-COVER® Electric Roll Tarp
- ★ 22" Elmer's unload auger
- ★ Camera system
- ★ Self-steering front and force-steering rear axles for tight cornering or narrow approaches
- ★ Movable while partly loaded
- ★ Minimum 200hp required

## Benefits

- The Walkabout Mother Bin guarantees the ability to continue or extend harvesting time if elevators close, the distance from farm or elevator is too far for trucks to keep grain away from combines. Problems arise because of slow unloading at the elevator or on-farm storage or if breakdowns anywhere in the transport, delivery or storage chain occur.
- Acts as a surge tank for grain when trucks can't keep up with combine and grain cart holding capacity. Eliminates the need for a truck to be present to empty the grain cart.
- Completely mobile and able to move from field to field as the harvest progresses.
- Allows farmers to operate with less help and less equipment by holding 4 to 6 single semi loads of grain, this allows a reduction in trucks and/or employees...**which saves the owner time and money!**

# Solid Steel Construction

Floor Auger

Flow Gate Indicators

Extra Large Windows

Steering Indicators

Full Length Cleanout Doors

Front & Rear Steering

- ★ The 17" Elmer's floor auger moves your commodity quickly through the Walkabout Mother Bin. Our front and rear flow gates can be used for blending grain.
- ★ Our 22" Elmer's unload auger is capable of unloading at an industry leading speed with an adjustable 4-way spout and extra long reach it is designed to increase unloading convenience and speed.
- ★ The Walkabout Mother Bin is equipped with eight windows. The amount of grain being unloaded or remaining in the bin can be monitored visually through the windows on the side, front and rear of the bin.
- ★ The Mother Bin has full length cleanout doors in each section, eight in total. This allows users to completely clean out the bin between commodities and/or certified and non-certified grains.
- ★ Our bin is equipped with steering on all axles. Front and rear steering provides easy maneuverability. The rear tires are steered hydraulically from a lever in the tractor cab and the front tires automatically steer in the direction of the towing vehicle for easy cornering.
- ★ Our AGRI-COVER® Electric Roll Tarp accommodates more grain. The Agri-Cover Side Locking Tarp is constructed of quality vinyl that remains flexible to -40° F (-40° C) with welded ends for additional strength and flexibility.

AGRI-COVER® Electric Roll Tarp

Elmer's Unload Auger

- ★ Our two latch rear access door makes servicing and cleaning the Mother Bin easy and simple.
- ★ Every Mother Bin is equipped with two wireless cameras. One is in the rear of the bin which acts like a rearview mirror. The second camera is located on the auger, allowing users to see inside the trucks while unloading.
- ★ The Walkabout Mother Bin hitch is a single tang hitch that must only be used with a clevis-type tractor draw-bar. 1 3/4" or 2" pin must be used.
- ★ Outback Wrap is designed to Make Hooking Up Easy and every Walkabout Mother Bin comes with a full set of hydraulic hose markers and a Hose Boss, along with a customizable sticker key for easy hydraulic connections.

Outback Wrap

Outback Wrap Hose Boss

Hydraulic Connection Key

*The Mother Bin allowed us to reduce the number of trucks we own and combine more grain faster because the combines never stop. We farm with less equipment and finish earlier than before and it's because of the Mother Bin. We run like clockwork.*

*~Peyton Potter, Greenville, MS*

**USA Owned & Made**

# Options

The Walkabout Mother Bin is fully customizable to suit the needs of each individual operation. Customization makes a bin its most efficient while increasing the owners return on investment.

*It's great, it did everything you said it would do. Our elevator receives an average of seventy loads a day and forty of them are ours. The elevator asked how we are doing it and I said it's because of the Mother Bin.*

*~Trey Lawfield, New Madrid, MO (rice harvest)*

- ★ The Walkabout Mother Bin is designed to be used for several different types of commodities. A vibrator is essential in grain that is hard to move such a wet corn or grain that will bridge. With the Cougar Vibrator, the grain can be shaken loose easily.
- ★ We use a top quality scale system. Our scale system is comprised of fourteen load cells for accurate weights both while loading and unloading. Users can also add a large external display for easy to read weights when outside the tractor.
- ★ The Low Auger Unload Package can be used when emptying into a pit or hopper.

# Multifunctional Innovation

**The Walkabout Mother Bin's innovative design allows owners to use the Mother Bin in various other aspects of their operation; not just during harvest.**

## **EMPTY OR FILL GRAIN BAGS**

Along with the combine(s), keeping the bagger moving is essential to efficiency. By placing the Mother Bin next to the bagger while filling the grain cart is never delayed in returning to the combine(s). When emptying, the Mother Bin can move with the bagger so it never has to stop when truck movement is needed.

## **USE AS A SEED TENDER**

With 4000-bushel capacity, seed trucks are able to tender out of the bin while being positioned in a central location during planting time.

## **SPEED UP LOADING TRUCKS**

With an industry leading unload rate, operators are able to load trucks within a few minutes. Trucks come into the field and load straight out of the WMB at the same or faster rate than being loaded by the grain cart. Saving massive amounts of time and creating quicker turnaround times for drivers and operators.

## Unending Advantages

- With the Walkabout Mother Bin, users are able to blend grain to get the desired moisture content by using the flow gate feature.
- When inclement weather is approaching, users can get their commodity out of the field and protected.
- The Mother Bin allows users to run smaller grain cart(s) and smaller tractors resulting in less compaction. Less soil compaction leads to higher production and less need for tillage or fertilizer to boost production.

*"Crystal, I have to tell you about the blending feature of the bin! This year I had a field of sunflowers get away from me. When I opened up the field, they tested at 14% moisture and the elevator wouldn't take them until they were down to 10. Luckily, I had a bin of flowers at home that were 8%. It took some work, but I loaded those 8% flowers into the bin and used the blending feature with the flow gates and blended the whole field down to the 10% moisture. The elevator just couldn't believe I was able to do that."*

*~Jerry Weinheimer, Onida, SD*

# Dimensions

Maximum Width	14'
Maximum Height (for transport)	13' 4"
Height of Top of Bin Side	13' 4"
Length of Bin	48'
Overall Length	58'
Length of Pull	6' 4"
Auger Height to Tip Down	15' 1"
Auger Width to Spout	8' 9"
Overall Auger Height	19' 6"
Tire Size	425/65R 22.5
